Intrinsic non-radiative voltage losses in fullerene-based organic solar cells

Johannes Benduhn^{1*}, Kristofer Tvingstedt^{2*}, Fortunato Piersimoni³, Sascha Ullbrich¹, Yeli Fan^{4†}, Manuel Tropiano⁵, Kathryn A. McGarry⁶, Olaf Zeika¹, Moritz K. Riede⁷, Christopher J. Douglas⁶, Stephen Barlow⁴, Seth R. Marder⁴, Dieter Neher³, Donato Spoltore¹ and Koen Vandewal^{1*}

Organic solar cells demonstrate external quantum efficiencies and fill factors approaching those of conventional photovoltaic technologies. However, as compared with the optical gap of the absorber materials, their open-circuit voltage is much lower, largely due to the presence of significant non-radiative recombination. Here, we study a large data set of published and new material combinations and find that non-radiative voltage losses decrease with increasing charge-transfer-state energies. This observation is explained by considering non-radiative charge-transfer-state decay as electron transfer in the Marcus inverted regime, being facilitated by a common skeletal molecular vibrational mode. Our results suggest an intrinsic link between non-radiative voltage losses and electron-vibration coupling, indicating that these losses are unavoidable. Accordingly, the theoretical upper limit for the power conversion efficiency of single-junction organic solar cells would be reduced to about

Part 2-

EXPLORE DATA

What we would do in this part

- ❑ Search entries

- ❑ Personalize your dashboard, and visualize results

Resources

- [Step by step guide.](#)

- Original video on [youtube.](#)

Question 1:

How many entries of hexagonal boron nitride (h-BN) are available in NOMAD?

Menti

Join at menti.com | use code 4806 2981

Hints:

- ☐ Use Elements / Formula filter
- ☐ Use Structure / Symmetry filter

Question 2:

What is the range of bandgap of h-BN in NOMAD entries?

Hint:

☐ Use Properties -> Electronic filter

Menti

Join at menti.com | use code 4806 2981

Question 3:

How many entries in NOMAD have calculated bandgap of h-BN between 5.9 eV and 6.5 eV?

Menti

Join at menti.com | use code 4806 2981

Hint:

- ☐ Use the slider or give exact min. and max. values in Properties - Electronic filter

Example 2: Solar Cells

Example 2: Solar Cells

My device:

contact: Au

HTL: Spiro-OMeTAD ($C_{81}H_{68}N_4O_8$)

Perovskite absorber: $CsPbBr_2I$

ETL: TiO_2 -c (compact Titanium Dioxide)

contact: FTO (Fluorine-doped Tin Oxide)

Substrate: SLG (Soda Lime Glass)

Question 1:

How many entries in NOMAD have the elements of the absorber layer (CsPbBr₂I)?

Menti

Join at menti.com | use code 4806 2981

Question 2:

How many of those entries include solar cells data with:

- CsPbBr₃ as an absorber layer,
- SpiroOMETAD as Hole Transport Layer and
- TiO₂-c as Electron Transport Layer ?

Hint:

☐ Look Use Cases -> Solar Cells filter

Menti

Join at menti.com | use code 4806 2981

Question 3:

Show the range of reported efficiencies from these entries.

Menti

Join at menti.com | use code 4806 2981

Hint:

- ❑ Use HISTOGRAM widget, for X AXIS start typing “efficiency”

Question 4:

Show an overview of the available entries with info about **short circuit current density**, **efficiency**, and **open circuit voltage**.

Hints:

- ☐ Use **SCATTER PLOT widget**,
 - ☐ for X AXIS start typing “open circuit voltage”,
 - ☐ for Y AXIS -> “efficiency”,
 - ☐ for MARKER COLOR -> “short circuit current”

Menti

+

All that can be done by a code.

Summary about exploration

Think of the power of having your data
– together with the rest of the world's –
in something like that.

Sooo.... Part 3-

HOW DO WE PUT OUR DATA IN THERE?

From raw files to published datasets

FAIRmat tutorial 16
February 26, 2025

Publishing your data with NOMAD

To begin the journey from uploading raw files to publishing datasets with a Digital Object Identifier (DOI), you need to understand the **key NOMAD elements involved in the process.**

NOMAD user

To create a user account, follow the steps on this [link](#).

steps to create an account

0- a bit of vocabulary / concepts

- Uploads <- a group of file you upload
- Projects <- your work out of NOMAD
- Entries <- you've already seen that one =
files understood by NOMAD
- Datasets <- A group of related entry, possibly with a DOI

NOMAD uploads

NOMAD user

uploads

project 1

project 2

project 3

- Research data in NOMAD are organized inside uploads.
- Upload can be created for each project and be organized in nested folder directories.
- Each upload can contain multiple files and entries.

NOMAD entries

NOMAD user

entries

uploads

- Entries are generated automatically by NOMAD.
- Entries can be searched and viewed through dedicated pages.
- Files are processed into entries if a built-in parser is available.

Datasets in NOMAD

NOMAD user

entries

uploads

project 1

project 2

project 3

dataset 1

dataset 2

datasets

Datasets group related entries either from one upload or several uploads.

The key elements in NOMAD

NOMAD user

entries

uploads

project 1

project 2

project 3

dataset 1

dataset 2

datasets

So let's go: creating and managing uploads

Hands-on tasks:

- ☐ Create your first upload in NOMAD.
- ☐ Rename your upload.
- ☐ Understand the elements and views of the upload page.
- ☐ Share your upload with a collaborator.
- ☐ Publish your upload.

Lets go to NOMAD,
click [here](#)!

Uploading raw files to NOMAD

Hands-on tasks:

- ☐ Add files to your upload.
- ☐ Distinguish between generated entries and stored files.
- ☐ Preview and visualize your uploaded files/entries.

Uploaded raw files: entries vs. files

NOMAD Entries

- ☐ Originate from files for which a **built-in parser** in NOMAD exist.
- ☐ NOMAD **extracts the data** based on the data schema.
- ☐ This allows for **searchability, analysis** and **generating visualization**.

Other Files

- ☐ Originate from files that **do not have a built-in parser** in NOMAD.
- ☐ NOMAD cannot automatically extract and structure their data.
- ☐ They are **stored** as part of your upload, and can be downloaded or shared.

Exercise 1: uploading miscellaneous files

In this exercise, we will use files that are not processed into entries in NOMAD, such as, .pdf, .jpg, .txt, and .csv.

Hands-on tasks:

- ☐ Add files to your upload by drag-and-drop and by file browser.
- ☐ View and organize your files in your upload.
- ☐ Preview the files contents in the GUI.

Download the files!
click [here](#)!

Lets go to NOMAD,
click [here](#)!

Exercise 2: uploading computations data files

In this exercise, we will use input and output files of a DFT calculation for Iron(III) Oxide.

- These calculations were preformed using a code that is supported by NOMAD, i.e. the FHI-aims code.
- NOMAD has a parser for the FHI-aims code. This means it will create an entry for these data.

Download the files!

click [here](#)!

Exercise 2: uploading computations data files

Hands-on tasks:

- ☐ Add files to your upload by drag-and-drop.
- ☐ Explore the generated entry page from the files.
- ☐ Provide additional metadata to the entry.

Lets go to NOMAD,
click [here](#)!

Exercise 3: uploading experimental data files

In this exercise, we will upload files of an xray photoelectron spectroscopy (XPS) measurement.

- NOMAD supports .nxs experimental data files.
- Scientific instruments generate raw files in other formats, such as .xml (from SPECS spectrometer).
- NexusDataConverter converts common formats to the .nxs format.

Download the files!

click [here](#)!

Exercise 3: uploading experimental data files

In this exercise, we will upload files of an xray photoelectron spectroscopy (XPS) measurement.

Hands-on tasks:

- ☐ Add .nxs files to your upload by drag-and-drop.
- ☐ Explore the generated entry page from the files.
- ☐ Use the NexusDataConverter to upload files with other formats, such as .xml.

Lets go to NOMAD,
click [here](#)!

Creating and publishing datasets

- Datasets are used to group entries, making it easier to manage related data.
 - Datasets can include entries from several uploads.
 - The same entry can be in several datasets.
- Datasets have no influence on the processing of data.
- Users can get a DOI for their datasets.

Creating and publishing datasets

Hands-on tasks:

- ☐ Create a new dataset, and include entries into the dataset.
- ☐ Explore and manage datasets.
- ☐ Assign a DOI to your datasets.

Lets go to NOMAD,
click [here](#)!
